Ruth Lawrence : Genius

- 1- Last year, for the first time ever, a nine-year-old girl won a place at Oxford University. She is Ruth Lawrence and she comes from Huddersfield in the north of England.
- 2- Ruth has been interested in maths since she was three years old. She was skilled at solving difficult problems in maths and she enjoys collecting maths books. She's been using computers since she was four. "She can surf and chat with people from all over the world. She would rather stay alone with a computer than speak with us", her mother said. Her father, Harry, works with computers and he quickly saw that Ruth was no ordinary girl.
- 3- The surprising thing is that Ruth has never been to an ordinary school. The father taught her at home with the help of private teachers." I needed the other teachers," he explained. "Because when Ruth was seven she knew more about computers than I did".
- 4- The home teaching ~~idea~~ worked well, it seems. In the special exam to enter Oxford University, Ruth had the highest mark of all the students. Most of them were twice her age and they came from all over the world.
- 5- Since her success newspapers and photographers have been following her everywhere. ~~Once~~, she left a bag full of university maths books at a railway station by mistake. The next day a newspaper printed a picture of her. Ruth and her father were very angry. They just want to lead a normal life but is that possible when you're a genius?
